# **Country-Specific Glucose Monitor List**

### Country Name: Ísland (Iceland)

#### **Important Information**

This is a non-comprehensive list, current as of *December 2021*. Absence of a specific glucose monitor or test strips from this list does NOT imply compatibility or incompatibility with EXTRANEAL (Icodextrin) PD solution. Similarly, other glucosemeasuring technologies which are not listed below (such as continuous glucose monitoring systems) may or may not be compatible with EXTRANEAL. Always contact the device manufacturer for current information. If the manufacturer cannot provide information regarding compatibility of the device with icodextrin and maltose, Baxter does NOT recommend that EXTRANEAL patients use the product. Baxter reserves the right to change this list without notice and does not represent that it includes all potentially incompatible products.

The glucose monitor manufacturers listed have certified to Baxter that they have tested (as per ISO 15197) their monitors with maltose and icodextrin to Baxter's recommended limits: 278 mg/dL (Maltose) and 1094 mg/dL (Icodextrin). The manufacturers certified that their "green" monitors mentioned below showed no interference of blood glucose readings. Please note that the compatibility list below is only for brand-name monitors used with the corresponding brand-name test strip. If a brand-name monitor is used with another manufacturer's test strip, **always contact the test strip manufacturer for current information**.

This list is compiled from a search via: Internet, Literature, Baxter internal studies, information from government agencies, test strip leaflets, safety alerts, and direct information from the product manufacturers. While efforts have been made to provide accurate and current information, Baxter does not manufacture these glucose monitors or test strips and thus does not guarantee the initial or continued accuracy of this information. Please contact the manufacturer(s) of the glucose monitor and test strip to obtain the latest compatibility information before using in conjunction with EXTRANEAL (Icodextrin) Peritoneal Dialysis (PD) solution.

- 1. EXTRANEAL (Icodextrin) PD solution contains Icodextrin. Maltose, a metabolite of Icodextrin, may interfere with certain glucose monitors or test strips. This interference will result in a falsely elevated glucose reading using these monitors or test strips.
- 2. This interference may mask true hypoglycemia or lead to the erroneous diagnosis of hyperglycemia. Thus, a blood glucose reading within or above the normal range in a patient on EXTRANEAL (Icodextrin) PD solution, using these monitors or test strips, may mask true low blood sugar. This may cause a patient or health care professional to not take the appropriate steps to bring the blood sugar into a normal range. Alternatively, a falsely-elevated blood glucose reading could cause a patient to get more insulin than needed. Both of these situations can lead to life-threatening events, including loss of consciousness, coma, neurological damage or death.
- **3.** The dialysis unit or patient should contact the manufacturer of the glucose monitor and/or test strips to determine if the monitor or test strips they are using are subject to interference by Icodextrin or Maltose. Also, consult the product information included with the glucose monitor and test strips.
- 4. The following list is for reference only. This list does not imply recommendation of these glucose monitors or test strips.
- 5. Identified compatibilities are shown in the table below. ONLY glucose-specific monitors and test strips should be used with patients on EXTRANEAL (Icodextrin) PD solution. Contact the manufacturer to verify that the test strips and monitor are glucose-specific. The list provides the contact information of the more common, major brand manufacturers.

## GLUCOSE MONITORS Updated December, 2021

Updated December, 2021						
<b>Glucose Monitor Brand</b>	Compatible with Extraneal (Icodextrin)	Test Type *	Manufacturer			
	PD solution					
	(Glucose-Specific)					
FreeStyle Freedom	Yes	GDH-FAD				
FreeStyle Freedom Lite	Yes	<b>GDH-FAD</b>	Abbott Diabetes Care <u>www.diabetescare.abbott</u> <u>www.logaland.is</u>			
FreeStyle Lite	Yes	<b>GDH-FAD</b>				
FreeStyle Libre <sup>1</sup>	Not Recommended	GO				
FreeStyle Libre Pro <sup>1</sup>	Not Recommended	GO	(Logaland = Heilbrigðisvörur)			
FreeStyle Libre 2 <sup>1</sup>	Not Recommended	GO

TRUEresult	No	GDH-PQQ	

<sup>1</sup> These Abbott monitors (together with the Dexcom G4 Platinum, G5 Mobile, G6 and the Medtronic iPro2) are the leading Continuous Glucose Monitor Systems (CGM) and are **not recommended** by their manufacturers for use into dialysis patients, and despite having a GO based chemistry currently there is not definitive scientific evidence for their Extraneal compatibility. <u>Consult manufacturer for additional information</u>.

<sup>2</sup> These Arkray monitors/test strips have switched from an **incompatible** GDH-FAD based chemistry to a **compatible** GDH-FAD based chemistry. <u>Consult manufacturer for additional information.</u>

<sup>3</sup> The ACCU-CHEK Nano (not Aviva or Performa) and ACCU-CHEK Aviva Plus glucose systems are available within the United States ONLY and use test strips branded as ACCU-CHEK SmartView and ACCU-CHEK Aviva Plus, respectively. These systems use the Mut Q-GDH (compatible) strips. <u>Consult manufacturer for additional information.</u>

<sup>4</sup> TRUEresult (GDH-FAD), TRUEresult Twist 2, TRUEyou, True track monitors were not tested with the Baxter recommended limits for Icodextrin and Maltose. So, these monitors were not recommended to use for dialysis patients.

#### Test Type \*

**GO** = **g**lucose **o**xidase

- GDH-PQQ = glucose dehydrogenase with pyrroloquinolinequinone (note: GDO, glucose-dye-oxidoreductase, is an incompatible PQQ-based method)
- GDH-NAD = glucose dehydrogenase with nicotinamide-adenine dinucleotide

GDH-FAD = glucose dehydrogenase with flavin-adenine dinucleotide

Mut Q-GDH = glucose dehydrogenase with pyrroloquinolinequinone modified to eliminate maltose interference
